

Science Assessment Grid : Mountain Habitats : Year 5/6

Mountain Habitats																			
<div>Group:</div> <div>Year:</div> <div>Term:</div>																			
Science																			
Lesson 1	Can children explain what a food chain and a food web are?																		
	Can children organise animals and plants into food chains?																		
	Can children organise animals and plants into food webs?																		
Lesson 2	Can children identify similarities and differences between animals in different mountain environments?																		
	Can children classify animals into groups according to varying criteria?																		
	Can children use a branching database to identify animals?																		
Lesson 3	Do children know what the term 'adaptation' means?																		
	Can children describe some of the physical adaptations necessary for animals to survive in mountain environments?																		
	Can children identify physical adaptations of particular mountain animals?																		
Lesson 4	Can the children describe what a life cycle is?																		
	Are children able to describe the life cycle stages of one or more animals?																		
	Can children describe how living in a mountain environment affects an animal's life cycle?																		
Lesson 5	Can children identify some of the animals that live on Mount Everest?																		
	Can children describe animals using appropriate vocabulary?																		
	Can children suggest some of the ways in which animals on Mount Everest may be similar or different to animals in other mountain environments?
